

Incident Hot Sheet

Date: 5/27/2020

Purpose of Incident Hot Sheets:

- To make all jobs aware of any significant incidents
- To make sure all jobs relay the information to all Cajun employees by tool box safety meetings and document the meeting

Description:

An incident occurred while attempting to relocate a casing pipe, with an excavator, along the median of an interstate. Shortly after the operator began tracking, the arm of the excavator contacted 3 (each) overhead 13,200 volt power lines which fell to the ground across all lanes of traffic. There were no injuries.

A view of the power lines from where the casing pipe was staged.

The resulting damage to the arm of the excavator.

Key Focus Items:

- All jobsites should perform an assessment to include the following items:
 1. To identify any overhead electrical lines that exist on the project.
 2. Determine if the proper high visibility warning signs or barricades are in place to adequately alert personnel of overhead electrical lines.
 3. To identify the potential of equipment operating or traveling within 25 feet of any overhead electrical line.
- In order to minimize risk, in situations that require equipment to operate or travel within 25 feet near overhead electrical lines, we should first notify Site Management. The business unit Construction Manager and Manager of Safety should assist with the planning and execution of the task.

Acknowledgement:

All Cajun Industries, LLC. Superintendents are required;

- To acknowledge that this Incident Hot Sheet has been received,
- The information was relayed to employees,
- Have a copy of the signed & reviewed IHS indexed.
